Hallwise

A name badge that remembers the room

BUILT ON META'S MODELS
META GLOBAL AI DEVELOPER HACKATHON
OCT 2026

0.8s

from an introduction to **"met before"**, no model call

24/25

names right across 12 accents; 13 / 25 without hints

3–5s

per **edge-finder** pass on Muse Spark Open; 26–37 s on Spark

259

server tests, written at the event

Measured in rehearsals, Oct 27–29: synthetic voices in a living room and a real iPhone 17 Pro. Zero users yet.

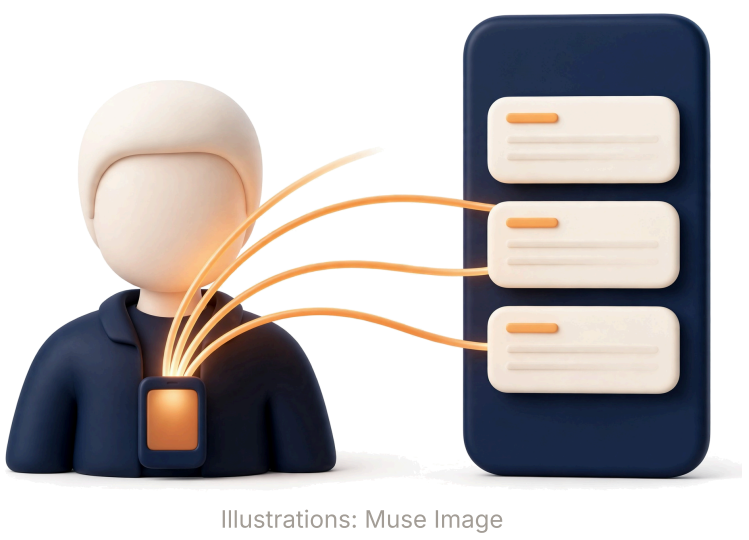

THE PROBLEM

Networking doesn't fail in the room. It fails the next morning: names forgotten, promises unsent, asides never heard.

WHAT IT DOES · ONE EVENING

01 · CONNECTED	**"Margaux may be Chloé's colleague."** The moment she says her name.
02 · HEARD	**"Said to Julien, in French: one page, with numbers."** What wasn't said to you.
03 · CHECKED	**"No public page ties Julien to Corvane."** From what they said; no card.
04 · DONE	**Your deck rebuilt as one page. Follow-ups written.** An introduction worth making, and where to meet them next week.

HOW IT WORKS · NOTHING TO TYPE

Illustrations: Muse Image

OUR CODE
4-channel audio · your voice, from above · names as hints

META MODELS
Muse Voice Transcribe · Muse Spark · Muse Spark Open · Baseten · Spark + web search · SAM 3.1

CHECKED
every answer checked

follow-ups · one page · introductions

WHY NOW

2 wearables that remember your day, bought
Amazon bought Bee (Jul 2025); Meta bought Limitless (Dec 2025)

410 Limitless users asked for a personal CRM
still unbuilt when Meta bought it (Dec 8, 2025)

One person, nine days, built at the event.
